A2.6 Read data channel signals

Table A2-6 shows the AXI read data channel signals. Unless the description indicates otherwise, a signal is used by AXI3 and AXI4.

Table A2-6 Read data channel signals

Signal	Source	Description
RID	Slave	Read ID tag. This signal is the identification tag for the read data group of signals generated by the slave. See *Transaction ID* on page A5-77.
RDATA	Slave	Read data.
RRESP	Slave	Read response. This signal indicates the status of the read transfer. See *Read and write response structure* on page A3-54.
RLAST	Slave	Read last. This signal indicates the last transfer in a read burst. See *Read data channel* on page A3-39.
RUSER	Slave	User signal. Optional User-defined signal in the read data channel. Supported only in AXI4. See *User-defined signaling* on page A8-100.
RVALID	Slave	Read valid. This signal indicates that the channel is signaling the required read data. See *Channel handshake signals* on page A3-38.
RREADY	Master	Read ready. This signal indicates that the master can accept the read data and response information. See *Channel handshake signals* on page A3-38.
