A4.8 Legacy considerations

AXI4 introduces additional requirements for the handling of some of the **AxCACHE** memory attributes.

In AXI4, all Device transactions using the same ID to the same slave must be ordered with respect to each other.

Note

- This is not an explicit requirement of AXI3. Any AXI4 component that relies on this behavior cannot be connected to an AXI3 interconnect that does not exhibit this behavior.
- ARM believes that most implemented AXI3 interconnects support the required AXI4 behavior.

This specification strongly recommends that any new AXI3 design implements the AXI4 requirement.

For **AxCACHE** bits names and memory type names it is required that AXI4 uses the new terms. AXI3 components can use either the AXI3 or AXI4 names.
