C3.3 Read acknowledge signaling

Table C3-16 shows the additional read acknowledge signal.

Table C3-16 Read acknowledge signaling

Signal	Source	Description
RACK	Master	Read acknowledge. This signal indicates that a master has completed a read transaction.

The **RACK** signal must be asserted for a single cycle and the interconnect must accept it in a single cycle.

The **RACK** signal must not be asserted before the cycle after the completion of the associated **RVALID**/**RREADY** handshake of the last read data channel transfer, as indicated by **RLAST**. The assertion of **RACK** must not be delayed to wait for the completion of another transaction. See *Handshake process* on page A3-37.

Read acknowledge must be sent for all transactions including coherent, barrier, and DVM transactions.

No ordering information is associated with read acknowledge, it is ordered the same as the last read data item and the associated read responses.

The interconnect must use read acknowledge to ensure that a transaction to a master's snoop port is not issued until any preceding transaction from that master to the same address has completed. See *Read and Write Acknowledge* on page C6-228.
