C3.5 Write Acknowledge signaling

Table C3-17 shows the additional write acknowledge signal.

Table C3-17 Write acknowledge signaling

Signal	Source	Description
WACK	Master	Write acknowledge. This signal indicates that a master has completed a write transaction.

The **WACK** signal is asserted by a master for a single cycle and the interconnect must accept the **WACK** signal in a single cycle.

The **WACK** signal must not be asserted before the cycle after the completion of the associated **BVALID**/**BREADY** handshake. The assertion of **WACK** must not be delayed to wait for the completion of another transaction. See *Handshake process* on page A3-37.

Write acknowledge, **WACK** is asserted for all write transactions, including barrier transactions.

No ordering information is associated with write acknowledge, it is ordered the same as the associated write responses.

The interconnect must use write acknowledge to ensure that a transaction to a master's snoop port is not issued until any preceding transaction from that master to the same address has completed. See *Read and Write Acknowledge* on page C6-228.
