C4.9 Evict transactions

This section defines the state changes associated with the Evict transaction group that are issued on the AW channel.

C4.9.1 Evict

An Evict transaction indicates that a cache line has been evicted from a master's local cache. There is no data transfer associated with an Evict transaction. An Evict transaction must only be used in a shareable memory region.

Note

An Evict transaction is only used by a master that supports a snoop filter.

Table C4-28 shows the expected cache line state changes for the Evict transaction.

Table C4-28 Expected Evict cache line state changes in a shareable memory region

Transaction	Start state	Expected end state	Legal end state	
			With Snoop Filter	No Snoop Filter
Evict	UC	I	I	Not used
	SC	I	I	Not used
